

University of Delhi

in collaboration with

Fortis Hospital, Shalimar Bagh

organizing a one-day workshop

Breast Cancer Awareness Workshop

Breast cancer is the most common cancer in India accounting for more than 25% of all new cancer cases in women. The most prevalent time for its incidence is from early thirties and peak between 50-65 years. Survival rates for Breast Cancer in India are lower compared to countries like the US, with more than 50% of Indian women diagnosed in stages 3 and 4. Early detection is the major tool to fight Breast Cancer.
